SUMMARY

MAIB (AI in Business) candidate at SP Jain School of Global Management, Dubai, with a B.Tech in Computer Science Engineering (AI & ML). Seven months of production machine-learning experience on an NLP loan-advisory system for a North America lending client, delivered inside a five-person team. Independently designed and shipped four agentic AI platforms — spanning financial research, real estate, compliance, and vehicle valuation — plus a 913,000-row retail analytics platform that faculty validated. Works comfortably across model development, SQL, and the requirements documentation non-technical stakeholders actually read.

EXPERIENCE

Machine Learning Intern

Intelliza Solutions Pvt. Ltd. — Mumbai, India · Feb 2025 – Aug 2025

- Took a loan-advisory chatbot from Tkinter prototype to a production service on a North America client's POS platform — measured by live operation across the full loan lifecycle — by rebuilding the intent-classification and response layer in Python with Flask, spaCy and NLTK behind a REST API.
- Cut how often the assistant failed on unfamiliar borrower questions, checked against a fixed benchmark set before every release, by relabelling the training data, engineering features from raw query text, and adding fallback handling for out-of-scope intents.
- Shipped a location-aware branch and lender discovery feature that reached production users and passed client sign-off at rollout, after connecting the intent parser to live geolocation data and a SQL lender table so borrowers no longer searched by hand.
- Made deployments repeatable for a five-person team, evidenced by the shift from manual handoffs to a documented build-and-rollback runbook the team used for every release afterwards.
- Kept a seven-month engagement on schedule, tracked in a shared Excel delivery sheet, by turning model behaviour into written acceptance criteria non-technical stakeholders could sign off against.

LEADERSHIP

Class Representative

SP Jain School of Global Management (MAIB Cohort) — Dubai, UAE · Oct 2025 – Present

- Present cohort-level academic and operational issues directly to faculty and programme leadership on behalf of 28 students across multiple nationalities, then carry decisions back to the cohort in a form they can act on — the only point of contact between the two.
- Anchored live academic and cohort events for audiences above 1,000 without a script, drawing on trained public-speaking and event-anchoring experience.

KEY PROJECTS

FinCopilot

Generative AI · Agentic RAG · FinTech

- Built an agentic RAG financial-research copilot (LangGraph, FastAPI, Next.js) with XBRL-grounded citations and a Self-RAG faithfulness gate; 205 backend tests, CI-gated evals, \$0/month hosting.

Sakan AI

Agentic AI · Real Estate · Dubai Market

- Designed a 5-stage multi-agent real-estate deal-intelligence pipeline (LangGraph, FastAPI, Next.js) with live WebSocket reasoning traces, Stripe billing and Arabic localisation; 85 passing tests.

ComplianceAgent

Agentic AI · RegTech · AML/KYC

- Built an AML/KYC investigation copilot with a from-scratch NumPy graph convolutional network for risk scoring

and a mandatory human-approval gate; 80 tests (76% coverage), red-team suite 6/6 blocked.

AutoValuate

Computer Vision · Explainable ML · FinTech

- Shipped a damage-aware car-valuation app with an on-device YOLOv8/ONNX detector (0.732 mAP@0.5) and SHAP-explained XGBoost pricing; zero WCAG 2.1 AA violations.

ADDITIONAL PROJECTS

- MediFlow AI — RL that allocates ER beds, staff and equipment under uncertainty — balancing fairness and efficiency. (0.859)
- FraudShield AI — Sequence-aware fraud scoring that flags evolving patterns a rule engine misses. (LSTM / RNN)
- Lulu Sales Intelligence — Real-time, governed sales analytics across stores — streaming data to decisions. (913K rows)
- WaselX Express — Graph-based routing that turns last-mile delivery decisions into explainable, algorithm-backed comparisons. (15 nodes / 24 roads)
- StockWise AI — LSTM demand forecasting that cuts stockouts and overstock in inventory planning. (4.7%)

EDUCATION

Master of Artificial Intelligence in Business (MAIB)

SP Jain School of Global Management, Dubai, UAE · 2025 – Present

USD 9,000 merit scholarship recipient; Class Representative. Coursework: Deep Learning, NLP & Language Models, Software Development for AI, Databases, Corporate Finance, Marketing Management.

B.Tech, Computer Science Engineering (AI & ML)

Manipal University Jaipur · 2021 – 2025

Student Excellence Award and Brilliant Student Award — highest academic performance in B.Tech CSE (AI & ML).

TECHNICAL SKILLS

Machine Learning & Deep Learning

Machine Learning · Deep Learning · Predictive Modelling · Feature Engineering · Model Evaluation · XGBoost · TensorFlow · Keras · Neural Networks · Graph Neural Networks · Computer Vision (YOLOv8, ONNX) · SHAP / Explainable ML

NLP & Agentic AI

Natural Language Processing · Generative AI · Agentic RAG · LangGraph Multi-Agent Orchestration · Hybrid Retrieval (BM25 + Dense + Reranking, pgvector) · Self-RAG / Faithfulness Evaluation · Prompt Engineering · NLTK · spaCy

Engineering & Data

Python · SQL · MySQL · FastAPI · PostgreSQL · Docker · Git / GitHub · React / Next.js · TypeScript · Streamlit · WebSocket Streaming · Stripe Billing Integration · RBAC / Multi-Tenancy

Business & Communication

AI for Business · Business Problem Framing · Stakeholder Management · Market Research · Financial Modelling · Executive Presentation · Corporate Finance · Marketing Management

CURRENTLY PURSUING

AWS Cloud Practitioner · Power BI / Tableau · GenAI Developer pathways
